demand

Stage-1

$$P_{avg} = \frac{1800}{6} = 300$$

All takes 200 unit of electricity so 600 unit left

Stage-2

$$P_{avg} = \frac{600}{5} = 120 \text{ unit}$$

All take 100 unit of electricity so 100 unit left

Stage-3

$$P_{avg} = \frac{100}{4} = 25 \text{ unit}$$

All take 25 unit of electricity

Note:- Base price mentioned earlier is Price set by the seller and the increase is based on the utility framework of Delhi.

$$\text{Price avg} = \frac{1000 \times 2 + 100 \times 2.3 + 500 \times 2.5 + 200 \times 2.7}{1800}$$

$$\text{Price avg} = 2.233 \text{ Rs/unit}$$

Price paid by the buyer is:-

$$H_1 = 2.233 \text{ Rs/unit} \Rightarrow 2.233 \times 200 \times 1 = 446.6 \text{ Rs}$$

$$H_{10} = 2.233 \times 1 \times 200 + 2.233 \times 1.5 \times 100 = 781.55 \text{ Rs}$$

$$H_2 = 2.233 \times 1 \times 200 + 2.233 \times 1.5 \times 100 + 2.233 \times 75 \times 2.1667 = 1144.41 \text{ Rs}$$

$$H_5 = 1144.41 \text{ Rs}$$

$$H_3 = 1144.41 \text{ Rs}$$

$$H_7 = 1144.41 \text{ Rs}$$

$$\text{Total price} = 446.6 + 781.55 + 1144.41 \times 4 = 5805.79 \text{ Rs}$$

$$\text{Coated price} = 4019.4$$

Extra price due to high uses because of certain costumer

$$5805.79 - 4019.4 = 1786.39$$

$$\text{Extra avg} = \frac{1786.39}{1800} = 0.9924 \text{ Rs/unit}$$

i.e $H_6 (1400) + H_9 (200) + H_8 (700) + H_1 (500)$

[Note:- Here H_1 have to sell its extra 700 unit to utility at the price of 1.5 Rs/unit.

Stage-1

$$P_{avg} = \frac{2800}{6} = 466.67$$

Stage-2

$$P_{avg} = \frac{2200}{5} = 440$$

800 left

Stage 4

$$P_{avg} = \frac{800}{3} = 266.67$$

we will give only
